EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David Brezina on 19 July 2005.

2. The application has been amended as follows: The phrase --plurality of-- has been inserted prior to the term "high" in line 3 of claim 1, for grammatical clarity and to more clearly define the invention.

Claims 17-21 have been cancelled.

Drawings

3. The drawings were received on 20 May 2005. These drawings are approved.

Allowable Subject Matter

4. Claims 1-6 are allowed.

5. The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest a fiber reinforced plastic wheel rim having a structural portion with left and right braking surfaces. The structural portion is predominantly formed of a

Art Unit: 3617

plurality of high modulus first fibers, while the braking surfaces are formed with second reinforcing fibers having hardness properties which makes the second reinforcing fibers more easily machinable than the first fibers, wherein the first and second reinforcing fibers are formed in a monolithic plastic matrix.

The references utilized in the rejections set forth in the previous actions all lack the features described above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references are considered to show wheel rims having a braking surface formed of a difference material than the remainder of the rim. For example, Okajima et al shows a rim of this type. However, these references all lack the features described in the reasons for allowance above.
